

# POWER 4.2

## Medicago sativa

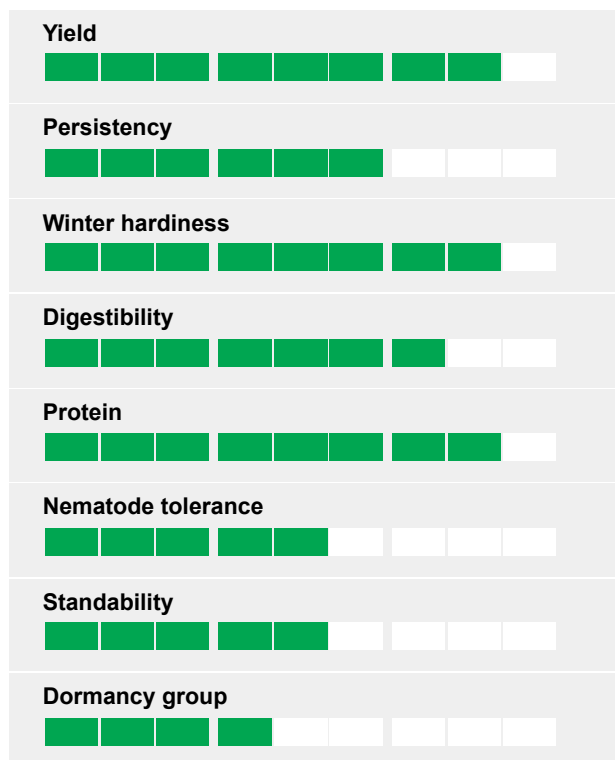

### Alfalfa/Lucerne

Powerful performance for today's forage grower

- Track record of top of test yield
- Dense, leafy canopy
- Wide geographic range adaption
- Strong persistence

### Ratings

### Description

Power 4.2 is a robust lucerne variety with a dense, leafy canopy. Foliage colour is medium dark green. Fall dormancy group 4 ensures good winter hardiness.

### High yield and strong persistence through a wide geographic range

Power 4.2 has shown top yields in various climatic conditions and the yield performance is maintained over years. Trials conducted at DLF research centres in Europe shows a competitive yield level under coastal as well as continental climate conditions.

### High disease resistance

Power 4.2 is highly resistant to the most important lucerne diseases and with a good aphid resistance as well.

### Add Power!

Add Power 4.2 to your crop rotation to optimize forage yield and quality.

### Characteristics and insect ratings

Source: USA

Characteristics	Rating
Fall Dormancy	4,3
Multifoliate Leaf Expression	81%
<i>Insect Ratings</i>	
Pea Aphid	R
Spotted Alfalfa Aphid	R

R=Resistant, HR=Highly Resistant

### Yield results

DLF trials 2014-15

Yield, ton drymatter per ha	Rennes, France		Zivotice, Czech Republic	
	Power 4.2	Control	Power 4.2	Control
1st year	12.9	12,3	16.3	16.6
2nd year	13.4	13.0	16.8	15.5
1st + 2nd year	26.3	25.3	33.1	32.1
Relative	104	100	103	100
