

TETRATOP

Lolium x boucheanum

Hybrid ryegrass

Perennial type hybrid

- Intermediate heading with the very best persistency
- Dense sward
- Good winter hardiness
- Very good snow mold resistance

Ratings

Rust tolerance

Spring growth (early)

Density

Perennial means persistent

TETRATOP is one of the few true perennial type hybrid ryegrasses available. The variety is characterised by a very good persistency - the optimal choice for combined yield and duration.

Snow mold resistant

The persistency is further ensured by a very good snow mould resistance.

Forage quality

Compared to Italian type hybrid ryegrasses, TETRATOP maintains higher forage quality throughout the season due to less aftermath heading.

Usage

TETRATOP is suited for high quality conservation purpose or highly productive grazing compositions.
