Salt tolerance

Close mowing tolerance

Wide confirmation of performance

BEUDIN is one of those varieties performing well wherever they are planted. The French national list and the recommended lists in The Netherlands (Grasgids) and in the UK (STRI) all recognizes the high performance of BEUDIN.

Aestheticism no compromise

What strikes at first view is the very pleasant visual merit. Number One for visual merit in the STRI lawn trial - with high density, fine leaves, close-cutting compatible - everything adds up to a superb prestige lawn ingredient.

Summer visual merit

Genetics little by little improves the weak sides of each species. For an ornamental species like slender creeping red fescue, it is important to maintain the visual merit even in the summer. Saving water and maintaining the visual merit are some of the benefits of BEUDIN.
