

EMERAUDE

Festuca arundinacea

Tall fescue

Green Precious Grass...

- Intermediate heading date
- Palatable and healthy year-round
- Highly persistent
- Fine tolerance to spring frost

Ratings

Performance in Spring

EMERAUDE starts growing early in the spring and supports cold periods after growth start.

Heat and Drought Tolerant

The high yields obtained in the spring is followed by a good growth through summer and autumn with much higher potential than ryegrasses due to heat and drought tolerance – a good reason to consider EMERAUDE as a mixture partner.

Resistant to Rust and Palatable

EMERAUDE fights well against the principal threat – crown rust – and remains green preserving yield potential and palatability. EMERAUDE has shown fine palatability in grazing trials.

Characteristics

Source: Off. French Trials - Geves (France)

	Emeraude	Barcel
Rust	5,8	4,7
Cold	6,4	5,6
Softness of leaves	6,1	7,1
Palatability	4,7	4,5

Characteristics

Source: Off. French Trials - Geves (France)

	Emeraude	Barcel
Spring dry matter yield	103	100
Summer/aut. DM Yield	100	100
Annual Yield DM (rel.)	103	100
Heading (date)	05/05	09/05
Flexibility of use (days)	45	44
