Digestibility

Early growth start and wide spring window

TOWER is ranked as one of the latest heading tall fescues with +3 or +4 days compared to the standards.

Outstanding disease resistance

TOWER has shown excellent disease resistance to all common diseases: crown rust, stem rust, leaf-spot, virus. This is an extra insurance to maintain high forage quality, palatability and persistency.

Breathtaking yield capacity

After an early start in spring TOWER continues growth all the season. +8% compared to standards - a true genetic progress.

Soft leaves

The improved softness level of the leaves does not compromise the rusticity of TOWER and allows excellent palatability.

Disease resistance - 1 to 9. 9 = resistant
