

TWO-PUTT

Poa reptans

Creeping bluegrass

Go for single putts and avoid three-putts using TWO-PUTT

- Perennial, easy establishment
- Smooth & even putting surface
- 3 mm cutting height without problems
- Improvement of the most "used" green species

Smooth and even putting surface

Whether playing 9 or 18 holes the topmost goal is to avoid three-putts. TWO-PUTT produces smooth and even putting surfaces so you might even go for some single putts!

Fight fire with fire

Even with the most sophisticated equipment and maintenance, it can be impossible to avoid *Poa annua* invasion. The best way to fight back is using TWO-PUTT. It is just as "invasive" but has superior characteristics after generations of recurrent selection.

Easy establishment

TWO-PUTT is probably the easiest and fastest establishing golf green species. It will grow year round without any noticeable summer or winter dormancy. Under continental conditions the spring greening up after winter is very fast and significant, forming a dense and very playable surface. Under shady and wet conditions TWO-PUTT is really finding its place for growth compared to the "normal" greens species like fescues and bent grasses.

- Forms a uniform, dense turf at greens height
- Is very vigorous
- Upright growth habit
- Is shade tolerant
- Is stoloniferous & perennial
- Recovers well after stress during summer

- Is medium green according to fertility
- Recovers well from winter desiccation
- Stays green longer in the autumn under cold conditions compared to creeping bentgrass
- Out competes common *Poa annua*
- Seeding rate 10-15 gram pr m² on golf greens
