

KROMI

Agrostis stolonifera

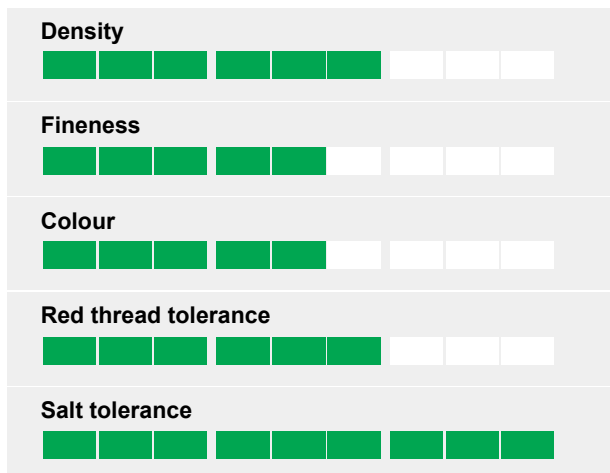

Creeping bent

KROMI - Suitable for use on Golf Greens or in Luxury Lawns

- Good drought tolerance
- Very good winterhardiness
- Low and slow growing
- Good general disease tolerance

Ratings

Dual Purpose

KROMI is suitable for use on golf greens or in luxury lawns because of its dense growth pattern and tolerance to close mowing.

Hard Winter Tolerant

KROMI has been selected in Denmark thereby proving its very good winter hardiness, which is built in the variety.

Also for dryer areas

As winter hardiness is very often correlated with drought resistance, KROMI can also be recommended for more dry areas when used in mixtures for lawn purposes without irrigation.
